Building Rolls

Application:

Building Rolls are designed mainly for the thermal insulation of roofs and walls.

These high

Temperature resistant rolls are suitable for use in pre engineered buildings, pre fabricated houses, Poultry farms, HVAC ducting etc. It is also used for thermal & acoustic insulation over false ceilings.

Service Temperature:

It can withstand temperatures up to 750° C.

Fire-Safety:

Non-combustible when tested to BS 476: Part 4 :1970

Facing:

Faced with reinforced Aluminum foil. Other facings available on request.

Thermal conductivity:

Product shows remarkably low thermal conductivity values when tested in accordance with BS 874: 1986.

R value for thermal resistance is 1.56m².k/w, at 10oC for 50mm thickness

Moisture:

Does not absorb any moisture from the air. Moisture has no effect on the stability of the building roll.

Density:

Available in densities of 40 to 1.2 meters and Non - standard sizes available on request.

Packing:

Building rolls are packed in HDPE bags.
